

## Easy access to information

The initial Redkite e-dashboard, which appears when users log in, can be accessed on any web enabled device, gives instant access to critical information and only displays information relevant to the user. From the e-dashboard, in just three clicks, you can drill down to find out all you need to know to maintain your assets.

## The Redkite Asset Management System provides information at multiple levels:

- *for users carrying out safety tests or preventative maintenance activities, the Redkite Asset Management System delivers real-time information and work sheets to the user's point of work whether PC, tablet, smart phone, bar-code or RFID reader. Work sheets are customised to match the location and skill level of the user,*
- *provides senior management with a centralised overview of the status of assets across all or part of the organisation. Including budget and capital replacement reports.*
- *provides line management with a local overview of the status of assets.*
- *provides front line personnel with tools to undertake tasks quickly, easily and accurately.*
- *external contractors and, for example, insurance companies, can produce and view work lists for any period in the future and can update asset records when activities have been completed*
- *operational assurance teams can quickly establish compliance with any internal or external standards.*

## A wide range of standard reports and charts are available.

With a wide range of reports to choose from you will be able to access all the information you will need quickly and easily. You can even customise reports and add them to your favourites menu.

The reports, with both local and centralised views, provide a wide range of invaluable management information.

Budget reports are also available, showing spend by asset type, location(s), department(s) as well as forecast reports to project budgets for replacement assets over a selected period.
